

TessyFarm Nexus AI

Building Africa's AI Operating System for Agriculture

A unified, AI-powered agricultural operating system designed to digitize, connect, and optimize the entire agricultural value chain across Africa — from smallholder farmers to governments and development partners.

ORACLE69 SYSTEMS

INVESTOR & STRATEGIC PARTNER BRIEFING

VERSION 1.0

Made with **GAMMA**

Millions of Farmers Face Systemic Barriers

Agriculture employs **60% of Africa's labor force** and is supported by **250 million smallholder farmers**, yet only **1 in 5** has access to digital tools. Farmers face fragmented solutions, limited market access, climate uncertainty, and lack of financial services. The current agricultural ecosystem is disconnected, inefficient, and leaves smallholders vulnerable to market volatility and environmental shocks.

Poor Extension Services

Timely agronomic advice is unavailable to most farmers; extension officer shortages widen the knowledge gap and slow adoption of improved practices.

Climate Uncertainty

Changing weather patterns, rainfall variability, and resource constraints increase the need for predictive decision-support systems and resilient planning.

Market Inefficiencies

Fragmented markets create unnecessary intermediaries, reduce price transparency, and limit producer income and bargaining power.

Financial Exclusion

Without reliable farm records or digital identities, farmers struggle to access credit, insurance, savings products, and investment capital.

Post-Harvest Losses

A significant proportion of produce is lost after harvest due to inadequate storage, weak logistics coordination, and poor access to buyers.

From Fragmented Farming to Intelligent Agriculture

TeszyFarm Nexus AI is a unified, AI-powered agricultural operating system that connects every stakeholder across the value chain — from smallholder farmers to governments and development partners. It transforms raw farm data into actionable intelligence, enabling smarter decisions on crop management, market access, financial planning, and climate resilience.

Environmental & Climate Control

Weather-aware guidance and risk monitoring.

Agricultural Knowledge Mapping

Turns farm data into practical agronomy insights.

Pest & Disease Diagnosis

Identifies symptoms and suggests interventions.

Fertilizer & Soil Testing

Recommends inputs based on soil needs.

Soil Health Management

Supports long-term fertility and regeneration.

The AI Ecosystem at the Heart of the Platform

The platform is organized into four interconnected layers — Experience, Operations, AI Intelligence, and Data & Integration — each contributing to a unified user experience. Intelligence is embedded throughout, not added as an afterthought.

The platform is organized into four interconnected layers: (1) **Experience Layer** - Mobile-first, role-based interfaces designed for farmers, advisors, and administrators; (2) **Operations Layer** - Farm management, market integration, and financial tools; (3) **AI Intelligence Layer** - Machine learning models for crop advisory, market forecasting, and climate prediction; (4) **Data & Integration Layer** - Secure data collection, blockchain-based farm identity passports, and API integrations with government and market systems.

Every operational action strengthens the intelligence of the platform. A single planting activity triggers coordinated AI recommendations across agronomy, finance, logistics, and market intelligence — creating a continuously improving agricultural operating system.

Designed Around the Farmer's Day-to-Day Reality

Every user journey with TessyFarm Nexus AI is designed according to six core principles: (1) **Simple** - Intuitive interfaces requiring minimal training; (2) **Role-Based** - Customized experiences for farmers, advisors, and administrators; (3) **AI-Assisted** - Intelligent recommendations and automated insights; (4) **Mobile-First** - Optimized for low-bandwidth environments; (5) **Offline-Ready** - Full functionality without constant internet; (6) **Contextual** - Localized content, languages, and agricultural practices.

01	Registration Farmers create a digital profile with personal information, farm location, crops or livestock, production history, and preferred language.
02	AI Profile The AI Farm Copilot builds a personalized profile, analyzing farm data alongside weather forecasts and historical production records.
03	Dashboard Role-based dashboards present only the tools and information relevant to each user's responsibilities and local context.
04	AI Recommendations Personalized guidance on irrigation, fertilizer schedules, pest management, and optimal selling opportunities.
05	Action Plans AI Logistics prepares harvest transportation plans; AI Finance updates projected revenue and credit readiness profiles.
06	Improved Outcomes Analytics generates executive dashboards, production analytics, yield tracking, and performance scorecards.

Eight Intelligent Modules, One Unified Platform

The Nexus Core Agricultural Modules section shows the four primary dashboard modules in the actual interface.

TessyFarm Nexus AI Projected Impact

50K+

Farmers Reached

50,000+ smallholder farmers and cooperative members reached a cross pilot and expansion phases.

+24.5%

Yield & Crop Coverage

Average increase in yield and crop coverage through AI-guided agronomic decisions and climate-smart practices.

49%

Waste Reduction

Less average waste through optimized harvest timing and improved coordination across the value chain.

+30.2%

Profitability Improvement

Higher profitability through reduced input costs and better market access for smallholder farmers.

Financial Inclusion

Expand access to formal financial services for **25-40%** of active users through verified digital production records and AI-supported credit readiness.

Climate Resilience

Improve resource efficiency and climate-smart practice adoption by **20–30%**, reducing waste in water, fertilizer, and logistics.

Women & Youth

Ensure women and youth represent **40-50%** of active users, training participants, and opportunity beneficiaries.

Not Another App — An Operating System

Most agritech solutions address isolated problems — a weather app here, a market platform there. TessyFarm Nexus AI is the only platform integrating operational management, artificial intelligence, analytics, and financial services into a single, unified operating system. It's designed as infrastructure for African agriculture, not just another app. The platform creates network effects: as more farmers join, the AI models improve, market data becomes richer, and the entire ecosystem becomes more valuable.

Dimension	Traditional Extension	Chatbots	Farm Apps	TessyFarm Nexus AI
Platform Scope	Manual, in-person	Single conversation	Narrow-point tools	End-to-end operating system
AI Capability	None	Generic responses	Limited or separate	Embedded across all workflows
Value Chain Coverage	Advisory only	Information only	Partial	Full: farm to market to finance
Offline Capability	Yes (in-person)	No	Varies	Offline-first by design
Financial Integration	None	None	Rare	Built-in credit & insurance
Business Model	Government-funded	Freemium	Direct-to-user	B2B2C ecosystem

 **Barriers to Replication:** Integrated architecture, AI-native design, accumulated operational data, strategic partnerships, multi-stakeholder network effects, and continuous AI learning become increasingly difficult to replicate as the platform scales.

From MVP to Pan-African Infrastructure

Implementation follows a structured, phased approach — validating assumptions, incorporating user feedback, and strengthening capabilities at each stage before scaling further.

Each phase is validated through measurable performance indicators, stakeholder feedback, and agile iteration — ensuring the platform scales responsibly while delivering sustained value.

Empowering African Agriculture with Artificial Intelligence

"Artificial Intelligence should augment farmers, not replace them. Connected agriculture creates connected prosperity."

TessyFarm Nexus AI is more than a technology platform — it's a movement to empower African smallholder farmers with the tools, knowledge, and market access they need to thrive. By building Africa's agricultural operating system, we're creating the foundation for food security, economic growth, and climate resilience across the continent.

Through artificial intelligence, operational infrastructure, trusted data, and ecosystem collaboration, the platform creates an environment where decisions are faster, markets are more transparent, logistics are more efficient, and financing becomes more accessible.

Partner with Us Collaborate to extend reach and amplify impact across new regions and agricultural sectors through strategic ecosystem partnerships.	Invest in the Future Support the scaling of a platform positioned for significant growth, recurring revenue, and measurable social and economic return.
