

TessyFarm Nexus AI

Building Africa's AI Operating System for Agriculture

Prototype by Oracle69 Systems · NextGen Knowledge Showcase 2026

EXECUTIVE SUMMARY

The Challenge

Across Nigeria and much of Africa, millions of smallholder farmers face fragmented information, poor market access, rising input costs, climate uncertainty, and limited access to financial services. Existing digital tools typically address only one part of this challenge — leaving farmers without integrated support.

Our Solution

TessyFarm Nexus AI is an intelligent agricultural operating system designed to help African smallholder farmers make better production, market, financial, and climate decisions using Artificial Intelligence. TessyFarm Nexus AI unifies these critical functions into a single AI-powered platform that delivers personalized recommendations based on each farmer's location, farming system, crop or livestock type, experience level, and current challenges.

CORE AI MODULES

Eight Intelligent Agents, One Unified Platform

AI Farm Advisor

Personalized crop and livestock guidance

AI Market Intelligence

Real-time price and market access data

AI Finance Assistant

Financial planning and credit readiness

Climate Intelligence

Weather forecasts and climate risk alerts

Farm Resilience Assessment

Vulnerability scoring and risk mitigation

Digital Farm Passport

Verified digital identity and farm records

Knowledge Centre

Curated agricultural best practices library

AI Reports

Automated farm performance analytics

EXPECTED IMPACT

Seven Measurable Outcomes

Improve Farm Productivity

Reduce Post-Harvest Losses

Increase Farmer Income

Improve Market Access

Strengthen Financial Readiness

Promote Climate-Smart Agriculture

Enable Digital Agricultural Records

INNOVATION

Beyond Chatbots — An Integrated AI Operating System

Unlike traditional agricultural chatbots, **TessyFarm Nexus AI** functions as an integrated **AI Operating System** that continuously supports farmers throughout the entire agricultural value chain — from pre-planting decisions through harvest, post-harvest management, and market linkage. Each farmer begins by creating a digital farm profile, and the AI then provides contextual recommendations that improve productivity, reduce post-harvest losses, strengthen climate resilience, enhance profitability, and increase financial inclusion. The platform's multiple AI agents work together as a coordinated intelligence layer, not as isolated tools.

TARGET USERS

Serving the Full Agricultural Ecosystem

Smallholder Farmers

The primary beneficiaries — farmers seeking intelligent, personalized decision support

Farmer Cooperatives

Collective groups managing shared resources and market access

Agricultural SMEs

Small and medium agribusinesses across the value chain

Extension Officers

Field agents delivering on-the-ground agricultural support

Development Organizations

NGOs and agencies driving agricultural transformation

Government Agricultural Agencies

Ministries and departments shaping national food security policy

VISION

Our North Star

"To become Africa's trusted AI Operating System powering intelligent, resilient, and profitable agriculture."

PRODUCT SHOWCASE

The Real Application — Built and Ready

The following screenshots demonstrate the live TessyFarm Nexus AI platform — from the main dashboard and AI Farm Advisor interface to the Digital Farm Passport and public landing page. These are real product screens, not mockups or wireframes.
